Personal Profile

Results-driven Analytics & Data Engineer with 4+ years of experience building scalable data pipelines, cloud data warehouses, and BI solutions for enterprise clients across the US and globally. Proven track record of improving data accuracy, reducing query latency, and delivering real-time insights to 100,000+ platform users. Proficient across the full data stack — from ETL/ELT architecture and star schema modelling to Power BI dashboards and Python-based automation. Seeking a challenging data engineering role in India where I can apply expertise in Azure, GCP, Python, and Power BI to drive data-driven decision-making at scale.

Technical Skills

Languages	Python, SQL, R, Bash
Databases	MySQL, MS SQL, PostgreSQL
Data Engineering	ETL/ELT Pipelines, Data Warehousing, Star Schema Modelling, Incremental Loading
Cloud	Azure (ADF, Azure SQL, ADLS), AWS, GCP (BigQuery)
BI & Visualisation	Power BI (DAX), Tableau
Dev Tools	Git, GitHub, Jira, Azure DevOps, BitBucket

Professional Experience

Analytics Engineer

June 2023 – October 2025

American Technology Consulting

- Led analytics delivery for 150+ US and global enterprise clients, building scalable reporting solutions serving 100,000+ platform users.
- Redesigned BigQuery warehouse models (fact/dimension tables), correcting join logic and optimising with window functions — improving data accuracy by 40% and reducing query time by 30%.
- Built and maintained 20+ multi-tenant Power BI dashboards enabling clients to monitor user training, engagement, and performance metrics in real time.
- Delivered client-specific ad-hoc reports analysing revenue, churn, and operational KPIs on demand.
- Developed Python-based ETL pipelines and API ingestion workflows (via Dify) to support AI-powered customer support model training.
- Acted as liaison between clients, engineering, and product teams; led daily stand-ups and improved feature delivery turnaround by 25%.
- Participated in hiring and scaling the analytics team.

Data Engineer

March 2021 – August 2022

Onward Technologies

- Built Azure Data Factory pipelines integrating financial and operational data across 6+ global business units with daily refresh cycles.
- Developed Azure SQL data warehouse models supporting global revenue analysis across 100+ client accounts and \$300M+ annual revenue streams.
- Built executive Power BI dashboards enabling real-time visibility into revenue by BU, regional BU, client, and project; tracked allocation of 200+ resources across engagements.
- Automated CapEx/OpEx workflows across departments, reducing approval cycle time by ~70% and eliminating manual email-based tracking.
- Digitised client onboarding workflows for sales teams, reducing onboarding turnaround by ~35% and improving data accuracy.
- Implemented incremental load strategies and validation checks, reducing reporting latency by 30%.

Data & Systems Analyst

April 2020 – March 2021

Alfa Facade Systems

- Built centralised MS SQL reporting database consolidating financial and procurement data across 5+ live projects and 40+ vendors.
- Developed 8+ Power BI dashboards tracking project budget variance, procurement turnaround, and vendor performance, improving cost visibility by 60%.

- Automated CapEx/OpEx approval workflows using PowerApps & Power Automate, reducing processing time from 5 days to 1 (80% improvement).
- Streamlined vendor onboarding by digitising documentation and approval flows, reducing onboarding time by ~40%.
- Reduced manual reporting and reconciliation effort by 50% through Python-based ERP data transformation scripts.

Projects

Real-Time Clickstream Analytics Pipeline

GitHub / March 2026

Production-grade Azure pipeline simulating e-commerce clickstream events — streaming, processing, transforming, and visualising millions of events with a 6-page Power BI dashboard. **Tools:** FastAPI, Apache Kafka (Azure Event Hubs), Spark Structured Streaming (Databricks), dbt Core, PostgreSQL, ADLS Gen2, Terraform, Power BI

Azure Revenue Data Intelligence Platform

GitHub / Feb 2026 - March 2026

End-to-end Azure revenue analytics platform with synthetic data generation, ADF pipelines, star schema warehouse, and Power BI dashboards. **Tools:** Python (Faker, NumPy), Azure Data Factory, Azure SQL, Power BI

Education

Stevens Institute of Technology

May 2024

M.S., Data Science | Hoboken, NJ

Vishwakarma Institute of Technology

May 2021

B.Tech., Electronics Engineering | Pune, India
